

Oceans- World Beneath the Waves

Synopsis:

More than 70 percent of the Earth's surface is covered by oceans, home to a majority of our planet's animal and plant species - many of which have never been discovered. The sea creatures we do know are mysterious, beautiful, dangerous, and soothing all at the same time. See them like never before in this special 12-disc set featuring renowned ocean cinematographer John Stoneman.

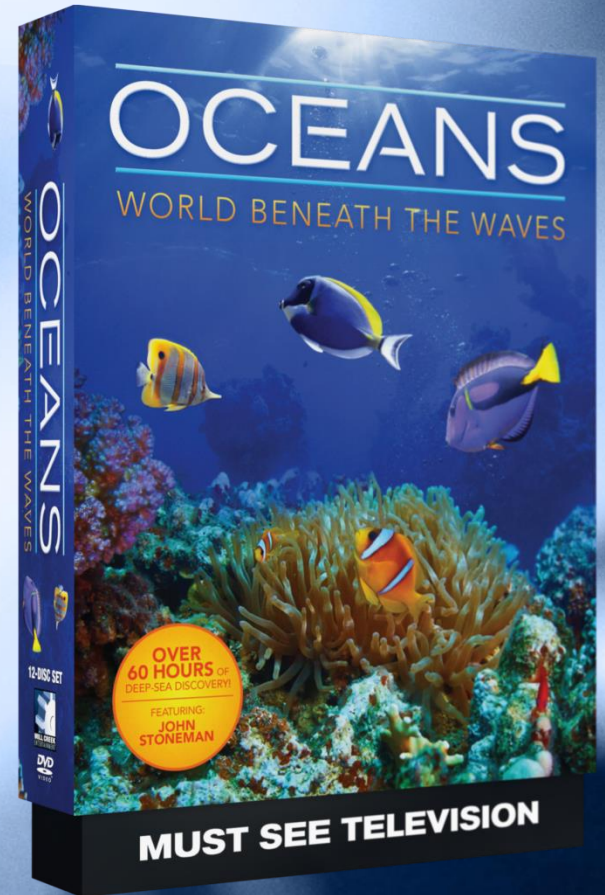

Experience everything under the sea - stunning coral reefs, sharks, whales, dolphins, even sunken ships!

Target Audience: Documentary fans, Shark Week Fans

Notable Cast/Crew: Legendary explorer John Stoneman

Key selling points:

- Over 60 hours of Deep Sea discovery!
- Over the past three decades Canadian naturalist John Stoneman has made over 250 underwater documentaries
- Stoneman is the recipient of more than 100 international film awards
- He is renowned for his pioneering work as director and cinematographer of *The Last Frontier*- the longest-running original television series about the sea
- April 22nd is Earth Day
